

WEBSITE ADVISORY BRIEF — SETUP PHASE DELIVERABLE

ashth.com

European Market Readiness

Technical specification for the Ashth development team — the website changes required to support the Luxembourg & regional market launch. Prepared under §3.1.1 of the Digital Marketing Services Agreement.

VERSION
1.0

CONFIDENTIAL — PREPARED EXCLUSIVELY FOR ASHTH / CONSCIOUSCARATS PRIVATE LIMITED

Why These Changes, Why Now

The European launch model is **not mass e-commerce**. The website's job in Europe is to act as a **catalogue and appointment engine**: visitors browse the collection, qualify themselves, and book a private viewing. Paid campaigns on Meta, LinkedIn, and Google will drive Luxembourg, Paris, and Brussels traffic directly at this flow from Month 1.

Every specification below exists to protect that investment: if the booking flow, tracking, or compliance layer is missing when campaigns go live, ad budget converts to wasted clicks.

Contractual Basis

This brief is the "Website advisory" deliverable defined in **§3.1.1** of the Digital Marketing Services Agreement (executed 26 June 2026): a written brief to the Client's development team covering the changes required for the European market model, including **booking mechanism specifications**, **European address formats**, and **tracking pixel implementation guidance**.

Per **§7**, implementation is carried out by the Client's own development team. Per **§3.2**, website development is excluded from the Consultant's services.

Live-Site Audit — 9 July 2026

This brief is based on a technical review of ashth.com from an EU (Portugal) connection. Verified: custom **Next.js** platform (developer: Weingenious Technocrats); **GTM already installed** (GTM-N3DL74CL) with GA4 + Microsoft Clarity but no Meta/LinkedIn tags; **no cookie consent banner**; a site-wide **"Schedule appointment" widget already exists** (WhatsApp linked to an Indian number); European section absent (/eu returns 404); ashth.eu/ashth.lu registered at EuroDNS, currently parked; forms have no country-code selector; no language switcher; EU server response is good (TTFB ≈ 0.5s).

One Brand, Two Regional Experiences

ashth.com remains the global and Indian home. The European market is served by a dedicated European section that the acquired domains point to.

ashth.com

Existing site, unchanged for the home market. Global brand anchor.

STAYS AS-IS

ashth.eu

Points to the European section — the consumer-facing catalogue and booking experience, priced from the European price list.

COMMERCE

ashth.lu

Luxembourg presence — points to the same European section (or a corporate landing page later).

LOCAL TRUST

Division of Work

Development team (Weingenious Technocrats): creates the European section as a subdirectory (e.g. ashth.com/eu/) or subdomain (e.g. eu.ashth.com) and confirms the target for DNS. As of this audit, /eu, /europe, and /luxembourg return the 404 page — the section does not exist yet.

Eytan (Consultant): repoints ashth.eu / ashth.lu from their current parking page to the European section — registrar access (EuroDNS) is already in hand, so DNS goes live as soon as the development team confirms the target.

Four Critical Changes

1 "Book a Private Viewing" Booking Mechanism

Good news: a floating "Schedule appointment" widget already exists site-wide. This spec is an adaptation, not a new build. For the European section: (a) the qualifying form below replaces the bare calendar action, (b) submissions route to the Luxembourg representative (Kuntal) — not the Indian team, (c) the accompanying WhatsApp button points at the European WhatsApp Business number instead of the current Indian number. Booking entry points should also appear on **every product page, the homepage, and the main navigation**. Kuntal confirms within 24 hours.

FORM FIELD	SPECIFICATION
Name	Free text, required
Location	City + country, required (drives the distance-qualification rule)
Contact	Email required; phone/WhatsApp optional but encouraged
Piece of interest	Pre-filled from the product page the form was opened on
Budget range	Select: under €500 / €500–2,000 / €2,000–5,000 / €5,000–10,000 / €10,000+
Occasion	Select: engagement / wedding / anniversary / gift / personal / other
Consent	Unticked GDPR consent checkbox with link to privacy policy — required

Routing rule: budgets of €2,000+ become confirmed appointments; €500–2,000 enquiries are directed to the online shop for self-service purchase; under €500 receives the catalogue newsletter path.

Fast option: a Calendly embed (≈€15/month) connected to Kuntal's calendar delivers this without custom development and can be live in one day. A custom form matching the site design is the preferred end-state; Calendly is an acceptable Phase 1 implementation.

Why it's first: 100% of the ad budget points at this flow. It is the single conversion event the entire local strategy is built around.

2

European Section with a Dedicated European Price List

A dedicated European section (subdirectory or subdomain — dev team's choice) presenting the collection with:

- ✓ **European prices drawn from a separate pricing table** — reflecting the landed Luxembourg cost of each piece (duties, shipping, VAT, and European margin) — **not** a currency conversion of the Indian price, which is how the site works today
- ✓ European contact block: Luxembourg address, +352 phone, WhatsApp Business number
- ✓ The "Book a Private Viewing" entry points (Spec 1) throughout
- ✓ A legal/imprint page appropriate for EU consumer-facing commerce

⚠ **Key change from current behaviour:** the site already auto-converts prices to EUR via geo-detection. Conversion is not the problem — the converted number is the *wrong price* for the European market. The product catalogue needs a second price field (or price table) per SKU for the European market, and the European section must read from it.

Why: a currency-converted Indian price ignores landed cost and positions the pieces incorrectly for the European market — every ad click lands on a price the business cannot honour.

3

Tracking Pixel Implementation

Google Tag Manager is already installed (container GTM-N3DL74CL, with GA4 and Microsoft Clarity active). The work is adding the missing advertising tags to the existing container and firing the conversion events below:

TAG	PURPOSE
Meta Pixel + CAPI	Facebook/Instagram campaign optimization and retargeting. Server-side Conversions API recommended for iOS resilience.
LinkedIn Insight Tag	LinkedIn campaign tracking and HNW audience retargeting
GA4 + Google Ads tag	Analytics, Google PPC conversion tracking and Quality Score signals

CONVERSION EVENT	TRIGGER
booking_submitted	Primary conversion — booking form successfully submitted
booking_opened	Booking form/modal opened (micro-conversion for optimization)
product_view	Product detail page viewed (retargeting audiences)
purchase	Self-service purchase completed (€500–2K tier)

Eytan will supply the Meta and LinkedIn pixel IDs once the Luxembourg-entity ad accounts are established (Setup Phase, in progress). The dev team's task is ensuring GTM loads on all European-section pages and implementing the four event triggers above.

Why: without conversion events there is no retargeting, no lookalike audiences, and no campaign optimization — the platforms fly blind and CPC is wasted.

4 GDPR Cookie Consent

Audit finding: the site currently has no consent banner at all, while GA4 and Microsoft Clarity fire on every EU visit — the gap exists today, before any new tags are added. A compliant CMP is required on all European-section pages:

- ✓ Explicit **opt-in before any tracking tag fires** — the existing GA4 and Clarity tags, plus the new Meta and LinkedIn tags, must be blocked until consent is given
- ✓ **Google Consent Mode v2** integration (required for Google Ads measurement in the EU)
- ✓ Reject option as prominent as Accept; preferences revisitable at any time
- ✓ EU-facing privacy policy covering booking-form and pixel data — the current "International Users & GDPR" section is a good start, but its blank data-contact placeholder must be filled with a monitored address

Suggested tools: Cookiebot, Usercentrics, or CookieYes — all integrate with GTM. Estimated effort: 2–3 days.

Why: analytics trackers already run on EU visitors without consent — the exposure exists now, and paid campaigns multiply the traffic. GDPR fines reach 4% of global annual revenue. Inseparable from Spec 3.

TIER 2

HIGH PRIORITY — WITHIN 30 DAYS OF LAUNCH

5 European Address & Phone Formats

Audit finding: the contact and signup forms capture a bare "mobile number" field with no country-code selector — built for Indian 10-digit numbers. All European-section forms (booking, contact, signup, checkout, newsletter) must accept European conventions: a country-code selector (+352, +33, +32 and others), variable-length numbers, postal-code-before-city address layouts, and alphanumeric postcodes. Every data-capture point carries the GDPR consent checkbox from Spec 4.

Why: named explicitly in the contract (§3.1.1) — a form that rejects a Luxembourg phone number or postcode loses the lead at the moment of highest intent.

6 Extend Existing Geo-Detection to the Full European Experience

The site already geo-detects visitors and switches currency automatically. Extend that same mechanism so European visitors receive the **complete European experience** — the European section, the European price table (Spec 2), and the European contact details — not merely a converted currency figure. Keep a manual region switcher as override.

Why: the geo infrastructure exists; it currently switches the currency symbol but not the commercial experience behind it. Organic and referral traffic needs the same routing paid traffic gets.

7 Mobile-Optimized Booking Flow

Meta campaigns are predominantly mobile. The booking form must be a short, thumb-friendly, single-screen experience on mobile: large tap targets, native select controls, no horizontal scrolling, and a visible submit button without keyboard overlap.

Why: scoped down from a full checkout overhaul — in the concierge model the booking form is the checkout.

TIER 3

RECOMMENDED — NOT LAUNCH-BLOCKING

Performance & Depth

8 Image Delivery for European Visitors

Audit finding: server response from the EU is already good (TTFB $\approx$ 0.5s from Portugal). The remaining risk is **product imagery served from S3 Mumbai** (ap-south-1), which adds latency to the largest page elements. Recommended: CloudFront or Cloudflare in front of the S3 bucket. Measure real LCP from Luxembourg/Paris after the European section launches; target under 2.5s.

9 EU Payment Options for the Self-Service Tier

For the €500–2,000 self-service segment: EUR card processing that reliably accepts European cards, plus PayPal and Apple Pay / Google Pay. BNPL options (Klarna, iDEAL, Bancontact) are deferred — high-ticket sales close in person, not at an online checkout.

10 Language Selector — English, French & German

The European section requires all three regional languages — **English, French, and German** — with a **user-facing language selector** in the site header. Language must be the visitor's choice; geo-detection may set a sensible default, but never lock it.

- ✓ Visible EN / FR / DE switcher in the European section header, persisted across pages
- ✓ Native-quality (not machine) translations for product pages, the booking flow, and legal pages
- ✓ Rollout order: English at launch → French → German, as translations are validated

Why: Luxembourg operates in all three languages, Paris requires French, and the German-speaking regional radius (Trier, Saarbrücken, Frankfurt) requires German. A trilingual selector is a trust marker for a Luxembourg-based luxury brand.

Descoped from the earlier Europe-wide audit

The original 9-market e-commerce audit included items that no longer apply to the local launch model:

- Multi-currency (EUR/GBP/PLN/CZK) — EUR only in this phase
- hreflang for 5 languages and per-locale sitemaps — one market, not nine
- Trustpilot review-volume push — trust is built in person and via LinkedIn in the concierge model
- Lab-grown diamond education hub — an SEO play for mass e-commerce, not appointment generation
- Full checkout overhaul — self-service is now the secondary path

Housekeeping found during the audit

- ✓ The 404 page template contains placeholder data — phone "99999-99999" and "sales@gmail.com" — visible to any visitor who hits a dead link
- ✓ The privacy policy's GDPR section has a blank data-contact placeholder — must name a monitored address

WHO DOES WHAT

Responsibility Split

Per §3.2 and §7 of the Services Agreement:

PARTY	RESPONSIBILITY
Ashth Dev Team	Implement all website changes in this brief (§7) — European section, booking mechanism, event triggers, CMP, form formats, geo-detection extension, mobile flow, language selector; add eytan@benzeno.com as a user on the GTM container (GTM-N3DL74CL) with edit & publish permissions
Ashth / Kuntal	Designate the single point of contact for approvals; manage all appointment bookings and sales (§7)
Eytan	This brief and specifications; DNS/CNAME configuration via EuroDNS (registrar access in hand) once the dev team confirms the target; Meta & LinkedIn pixel IDs from the Luxembourg-entity ad accounts; campaign build once Tier 1 is live (§3.1.1)

🕒 Sequencing

Paid campaigns cannot launch until **all four Tier 1 items** are live. Given the November event target and the 6–8 week invitation lead time, the recommended completion window for Tier 1 is **within 10 days of this brief**.

Launch-Readiness Checklist

Campaigns go live when every item below verifies:

- ✓ Booking form live on every European product page, homepage, and navigation
- ✓ Form captures all seven specified fields and routes submissions to Kuntal
- ✓ European section serves the dedicated European price list (not converted Indian prices) with Luxembourg contact details
- ✓ GTM container installed; all four conversion events fire and verify in Meta Events Manager, LinkedIn Campaign Manager, and GA4 DebugView
- ✓ CMP blocks all tags until consent; Google Consent Mode v2 active
- ✓ EU privacy policy published and linked from the consent banner and booking form
- ✓ Forms accept EU address and phone formats
- ✓ EU visitors geo-route to the full European experience (extending the existing currency geo-detection)
- ✓ Language selector (EN / FR / DE) live in the European section header
- ✓ Booking flow completes in under 60 seconds on a mobile device
- ✓ ashth.eu and ashth.lu repointed from the parking page to the European section (DNS by Eytan via EuroDNS, once the target is confirmed)
